

Veba MediTemp RescueTemp drip (infusion) warmer,

indispensable in
the ambulance.

*Administering drip solution at 37° C (98.5° F),
one of the elements in successful stabilisation.*

- Drip solution at 37° C (98.5° F) always on hand
- In compliance with NEN-EN 1789
- Easily portable bag
- Shoulder bag, therefore hands free at all times
- Works on 'on-board' voltage and mains voltage
- Suitable for 3 bags of 500 ml and for 1 litre bags
- Completely safeguarded and service friendly

In first aid, all treatment is directed towards stabilising the patient. With the administering of drip solution, especially in the case of 2 quick-running drips in accordance with the new protocols, solution at 37° C (98.5° F) appears to have a beneficial effect. The RescueTemp drip warmer ensures that drip solution at the correct temperature is always on hand. A reassuring thought.

Warming up drip solution at 37° C is part of the new ambulance standard NEN-EN 1789. The RescueTemp is the perfect, reliable answer
